INVESTMENT THESIS · AI-Generated Analysis

HDFC Bank (HDFCBANK) is a constituent of the Nifty 50 index.

The company scores 37.5/100 on our multi-factor composite model, ranking it in the HOLD category with a B grade.

Key strengths: ROCE at 41th percentile within Nifty 50, EPS growing at +6.2% per year (3Y CAGR), Revenue expanding at +26.9% annually. D/E ratio stands at 1.01x with interest coverage of 1.6x.

Our DCF valuation, using a 12.9% WACC and +15.0% historical FCF CAGR, yields a base-case intrinsic value of Rs.682 per share (P10–P90 range: Rs.452–Rs.1,097). The DCF model implies a margin of safety of -12.9% versus the current market price of Rs.783. The verdict is: SELL.

STANDARD RISK FACTORS

- Market Risk: Broad market downturns may affect price irrespective of fundamentals.
- Earnings Risk: Future earnings may deviate from historical trends used in this model.
- Valuation Risk: DCF models are sensitive to WACC and terminal growth rate assumptions.
- Sector Risk: Regulatory changes, commodity cycles, or competitive pressures specific to the industry.
- Liquidity Risk: Lower-volume stocks may be harder to exit at favourable prices.
